

Running MacOS in Proxmox

Follow the steps here: <https://www.nicksherlock.com/2022/10/installing-macos-13-ventura-on-proxmox/>

To pass through an RX 6600:

- Add PCI passthrough (must be raw device, not mapped)
- Disable “Above 4G decoding” and “Resizeable BAR” in host BIOS
- Add “agdpmod=pikera” as a boot argument in OpenCore
 - edit EFI/OC/config.plist in the EFI partition
 - Under NVRAM/Add/7C436110-...9F82/boot-args
- USB passthrough devices must have USB 3 enabled
- Change SystemProductName to “MacPro7,1” to enable multi-display
 - Use [macserial](#) to generate serial number and board serial and update them in config.plist
